JOB DESCRIPTION

Software Engineer

Entry-level / Fresher • Full-time • India

Department	Engineering / Information Technology	**Experience**	0–2 years
Job category	Software Development	**Work location**	On-site / Hybrid / Remote, depending on role
Reports to	Software Engineering Manager	**Compensation**	Competitive; based on skills and company policy

About the Company

TechNova Solutions is a fictional technology company that builds reliable, scalable software applications and digital products for businesses and their customers. The company values collaboration, thoughtful engineering, secure development, and continuous learning.

Job Summary

The Software Engineer will contribute to the design, development, testing, deployment, and maintenance of software applications. Working with experienced engineers and cross-functional teams, the role helps turn product requirements into reliable, maintainable solutions while following established engineering practices.

Key Responsibilities

- Design, develop, test, and maintain software applications and services.
- Write clean, efficient, reusable, readable, and maintainable code.
- Contribute to frontend and backend components according to project needs.
- Develop, integrate, and document RESTful APIs and application services.
- Work with relational or NoSQL databases such as MySQL, PostgreSQL, or MongoDB.
- Debug defects, investigate performance issues, and help deliver reliable fixes.
- Participate in code reviews and follow team coding, security, and quality standards.
- Use Git and GitHub for version control, collaboration, and code management.
- Write unit tests and support integration testing and quality assurance.
- Collaborate with designers, testers, product teams, and other engineers using Agile practices.
- Maintain technical documentation and communicate progress, risks, and blockers.
- Learn relevant tools, frameworks, and engineering practices as project needs evolve.

Required Technical Skills

Programming languages: Working knowledge of at least one language such as C++, Java, Python, or JavaScript.

Data structures and algorithms: Understanding of arrays, linked lists, stacks, queues, trees, graphs, sorting, searching, and problem-solving fundamentals.

Web development: Basic understanding of HTML, CSS, JavaScript, and familiarity with a frontend or backend framework where relevant.

Databases: SQL fundamentals, querying, basic schema design, and an understanding of normalization; familiarity with NoSQL is useful.

Development tools: Git, GitHub, an IDE such as VS Code, debugging tools, and basic command-line usage.

Core computer science: Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, and Software Engineering fundamentals.

Additional knowledge: REST APIs, testing principles, basic cloud concepts, and CI/CD fundamentals are beneficial.

Candidates are not expected to master every technology listed. The specific requirements depend on the team, product, and project.

Educational Qualifications

- B.Tech./B.E. in Computer Science Engineering, Information Technology, or a related discipline, or equivalent practical skills.
- Suitable for fresh graduates and candidates with up to two years of relevant experience.

Preferred Qualifications

- Academic, personal, internship, or open-source software projects.
- Familiarity with Agile or Scrum workflows.
- Exposure to AWS, Microsoft Azure, Google Cloud, or another cloud platform.
- A GitHub profile, portfolio, or project demonstration showing practical coding skills.

Soft Skills

- Analytical thinking and structured problem-solving.
- Clear communication and collaborative teamwork.
- Time management, adaptability, and attention to detail.
- Willingness to learn, accept feedback, and explain technical ideas clearly.

Performance Expectations

- Deliver assigned work that meets agreed requirements and timelines, raising risks early when needed.
- Produce readable, maintainable code that follows team conventions and security practices.
- Add appropriate tests, investigate defects carefully, and respond constructively to code-review feedback.
- Keep relevant documentation current and communicate progress with the team.
- Demonstrate continuous learning and effective collaboration.

Career Growth Opportunities

Potential progression may include Software Engineer, Software Engineer II, Senior Software Engineer, Technical Lead, Software Architect, or Engineering Manager. Career development depends on performance, experience, demonstrated skills, business needs, and the organization's structure.

Compensation and Benefits

Compensation is competitive and determined by company policy, location, skills, and experience. Depending on the employer and role, benefits may include health insurance, paid leave, mentorship, learning and development support, and flexible or hybrid work arrangements.

Equal Opportunity Statement

TechNova Solutions is committed to fair and respectful hiring. Decisions are based on role-related qualifications, skills, and experience, consistent with applicable laws and company policies.

How to Apply

Submit your resume, contact information, and (optionally) a GitHub or portfolio link through the company careers portal or recruitment contact. Replace the sample details below before publication.
